DETAILED ACTION

Election/Restrictions

An attempt for provisional restriction requirement was made on Tuesday, February 7, 2006 with Applicant's Attorney, Joseph Curtin. A written request was requested. See interview summary attached.

Restrictions to one of the following inventions is required under 35 USC 121:

- I. Claims 1-12, drawn to a data storage subsystem having three storage units with three check storage units along with a array controller, classified in class 714, subclass 766.
- II. Claims 13-20, drawn to a method for updating stored data with complementary data, classified in class 714, subclass 823.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, a data storage subsystem having three storage units with three check storage units along with a array controller and Group II, a method for updating stored data with complementary data are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claims of Group I do not require the limitations of providing a method for updating stored data with complementary data. The subcombination has separate utility such as in a single networked environment.

Art Unit: 2133

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
